

FORCEFIELD

Magnetic Filtration for your Engine

Removes the wear metal that your filter leaves behind

- **Extends Engine Life**
- **No Vehicle Modifications**
- **Lasts 50,000 Miles/80,000 Kms**
- **Captures 98% of Damaging Metal Particles.***
- **Your Factory Warranty Remains in Force**
- **Extra Protection for Stop-and-Go Hauling or Performance Driving**

**Double
Your Filter's
Power!**

Most of the "dirt" in your oil is actually fine metal particles. It's the result of normal engine wear. But, if these tiny metal particles stay in your oil, they can act like sand-paper and dramatically shorten engine life. To help protect your engine, **FORCEFIELD** adds advanced magnetic filtration technology to regular filters...and removes virtually all metal particles from your oil – even those that traditional filters miss.** This helps keep your oil cleaner, and clean oil helps your engine last longer...a lot longer!

Put advanced magnetic filtration technology to work in your car or truck **TODAY!**

* Captures over 98% of ferrous metal particles. Metallic content in lubricant varies by vehicle year, make and model.

** Most oil filter elements cannot capture particles smaller than 20 microns.

WARNING! Do not use or install this product if its use will expose the oil filter to a level below the engine oil pan – or in such a manner that the oil filter can strike the ground during normal vehicle operation.
